

FINAL CAPSTONE PROJECT

THE BATTLE OF NEIGHBORS – WEEK 2

WELCOME TO RIO DE JANEIRO!

Rio de Janeiro is one of the most beautiful cities in the world. It is a multicultural city, with a great potential for tourism. Its beaches are always crowded, so it is also one of the best places to make business.

BUSINESS PROBLEM

Rio is a coast city, where every year thousands of tourists come to know Rio's most famous places, like Christ the Redeemptor, the Sugar Loaf or Santa Teresa's Stairway. It is known to hold the most famous party: the carnaval.

This much of attractivity is also good for business, so in this Project, we will see the best place in rio to open an Italian restaurant.

BUSINESS PROBLEM

It is not na easy task opening a restaurant in Rio. There's a lot of cheap options, with extremely good food. So, in order to make money with a restaurant, it must be not only good, but excelente. Rio, as many other cities, has its noble zones, which we call South zone, and some pieces of West zone, although they are not really geographically correct. So in order to get the best location, what we are going to do is to survey how some restaurants are distributed among Rio's districts, and we are going to use Python to do this.

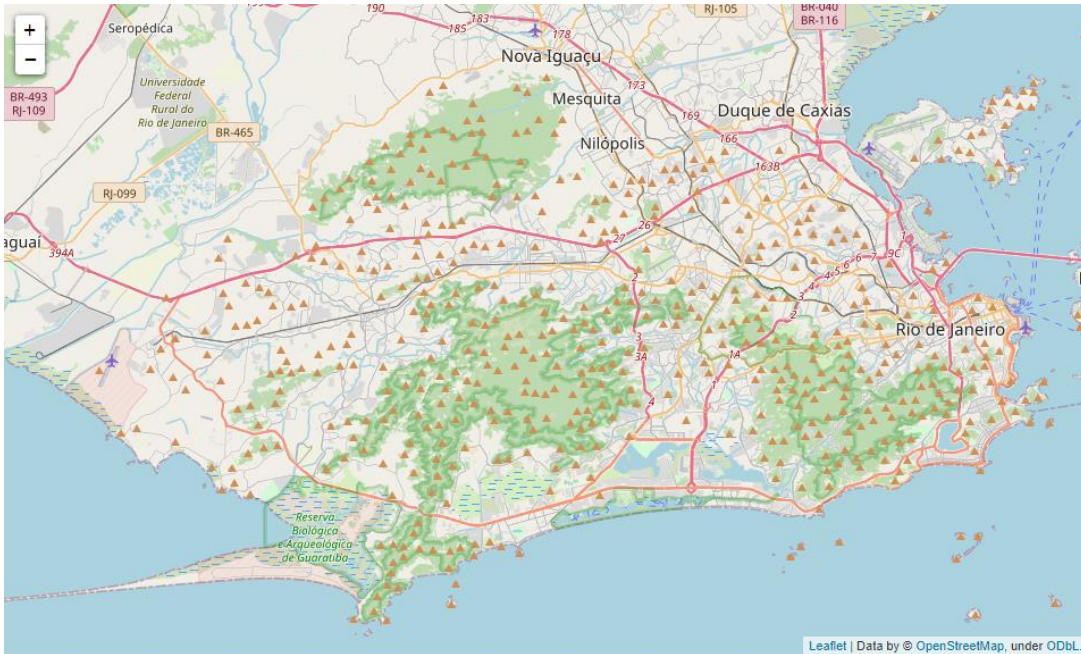

ENTER FOURSQUARE

- Foursquare is a social media tool to share experiences about an specific place. Everything in a geographical point can be shared, and ranked compared with other features. We are going to use the API provided by Foursquare to find our restaurant's homeplace.

FOLIUM VS GEOPANDAS

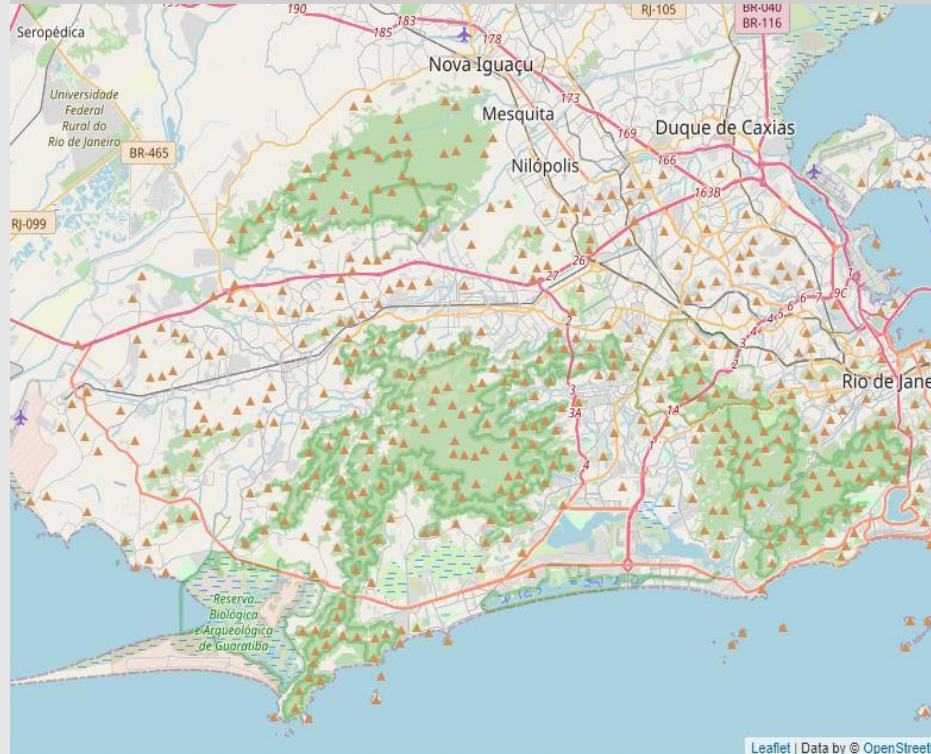

FOLIUM VS GEOPANDAS

FOLIUM

Folium: Folium visualizes data that's been manipulated in Python on an interactive leaflet map. Folium has built-in tilesets from OpenStreetMap and Mapbox. Folium provides an interactive map with many features.

GEOPANDAS

GeoPandas: GeoPandas is a Python package used to produce a tangible, visible output that is directly linked to the real world, but for that, you need a shapefile, in order to draw your map. However, you can do a lot of things Folium can't.

And for last...bokeh!

Bokeh is an interactive visualization library for modern web browsers. It provides elegant, concise construction of versatile graphics, and affords high-performance interactivity over large or streaming datasets. Bokeh can help anyone who would like to quickly and easily make interactive plots, dashboards, and data applications.

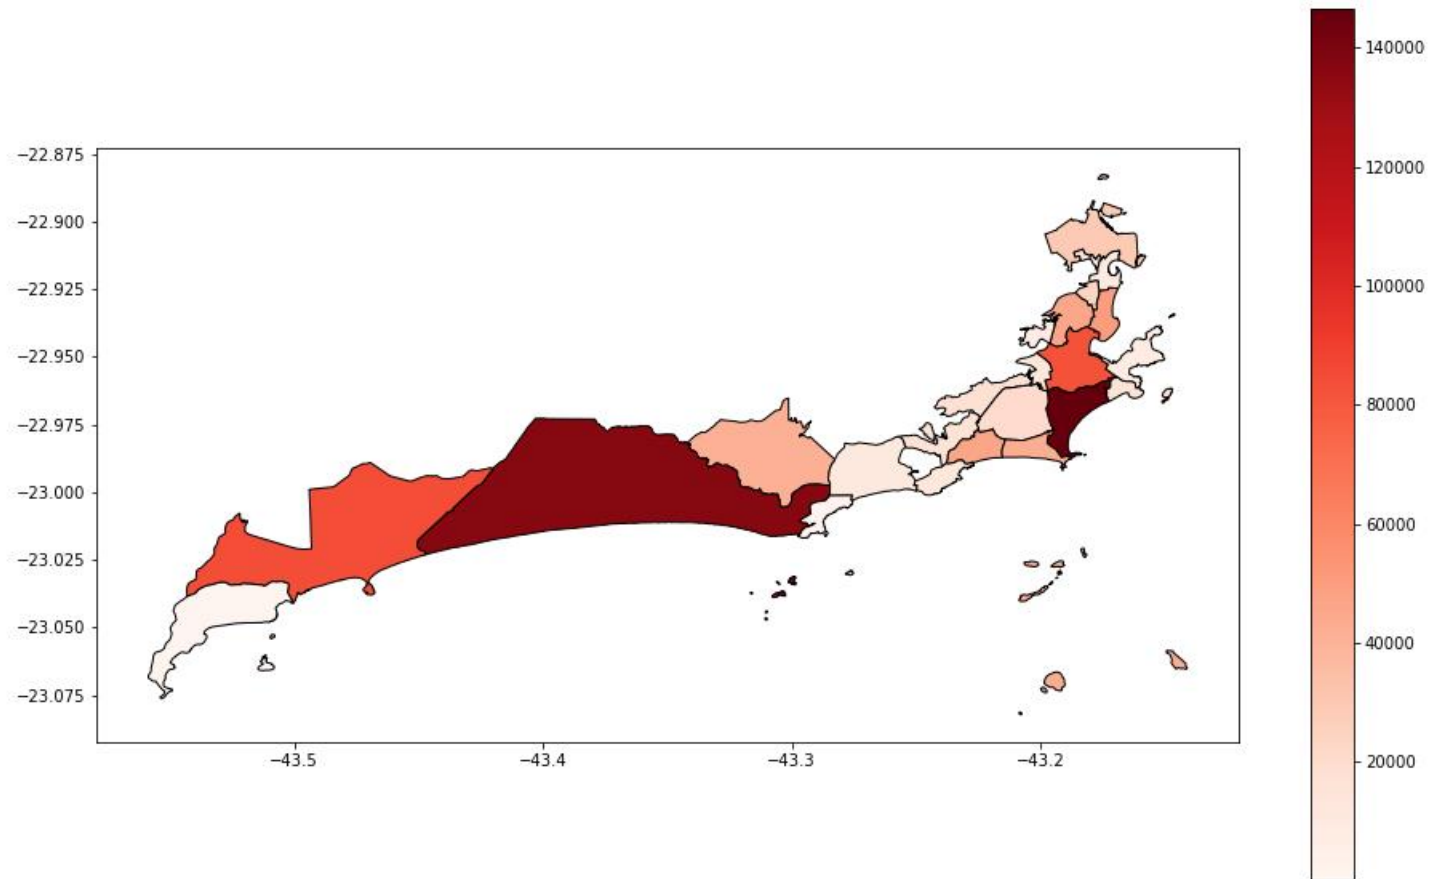

RESULTS - DATA FRAME

NOME	REGIAO_ADM	Numero_de_restaurantes	Population	Residencies	longitude	latitude	people_per_restaurant
